

Analyze the Student Grading Management Sub-System

During the system analysis, I realized that the Student Grading Management Sub-System is built based on 5 main entities: Student, Group, Grade Sheet, Lecturer and Course.

We will start with

- The first entity - Student. Student has StudentID as Key attribute. The next entity - Group has GroupID as Key attribute.
- The third entity - Course has CourseID as Key attribute.
- The fourth entity - Lecturer has LecturerID as Key attribute.
- The last entity - Grade Sheet has composite key attribute (StudentID, CourseID) .
